

Ideation Phase

Define the Problem Statements

Date: 29 September 2026

Team ID:	SWTID-2026-9911
Project Name:	Auto Ticket Classification using Flow Designer
Team Leader:	Indhu T
Team Members:	Mahalakshmi M, Venmathi S, Amala Prathiba J

Customer Problem Statement

Problem Statement	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A student or teacher who needs IT support for an incident	Report an IT issue such as a Wi-Fi problem, projector failure, password problem, or slow computer	The ticket has to be manually reviewed and classified	IT staff must read the short description and description and manually assign a category	Frustrated and delayed in getting the right support
PS-2	An IT helpdesk staff member	Process incident requests efficiently	I have to manually check each request and assign its category	The ticket-classification workflow is not automated based on keywords	Overloaded and less productive

Project Context: The school IT helpdesk receives multiple incident requests daily from students and teachers, such as Wi-Fi issues, projector failures, password problems, and slow computers. Currently, IT staff manually reviews each request and assigns a category. The proposed Flow Designer solution analyzes keywords in the incident's short description and description fields to automate classification.
